

EP Power Grit

PRESS RELEASE

Restructuring The EP Power Minerals Blasting Abrasives and Industrial Minerals Division is now EP Power Grit GmbH

Dinslaken, 04.09.2023

With four subsidiaries, EP Power Grit GmbH combines all activities relating to blasting abrasives and industrial minerals within the Power Minerals Group. The spin-off was completed with retroactive effect from January 1, 2023. The company headquarters remains in Dinslaken.

EP Power Grit, founded in spring 2022, combines the long-standing expertise of the blasting abrasives division of EP Power Minerals and SCR-Sibelco in Germany and other European countries. With the spin-off of the blasting abrasives and industrial minerals division of EP Power Minerals to EP Power Grit GmbH, the EP Power Grit Group is now fully positioned.

Marcus Klenke, CEO of EP Power Grit, has been familiar with the business unit since 2010. He sees great advantages in the newly formed EP Power Grit Group: "By combining the competencies of EP Power Minerals and the many years of experience of SCR-Sibelco in the international market, we can offer our customers an even larger portfolio of high-quality blasting abrasives and industrial minerals."

EP Power Grit operates production facilities for the manufacture of blasting abrasives and industrial minerals through four subsidiaries in Belgium, Germany, Finland, and the Netherlands. The previous SCR-Sibelco companies have been part of EP Power Grit as new subsidiaries since December 2022 and have fully rebranded.

About EP Power Grit:

EP Power Grit, a company in the EP Power Minerals Group, specializes in blasting abrasives and industrial minerals based on aluminum, iron or calcium silicates, and other minerals, raw materials and glass. With modern production facilities, expert advice, reliable supply and professional waste disposal operations, the company sets standards worldwide. Its extensive expertise helps customers achieve perfect surface properties and prepare surfaces effectively.

The environmentally friendly products are used for surface cleaning in industry, on buildings and ships, for water jet cutting or as decorative and special-effect construction materials. The high-quality product range is manufactured at five sites in Germany, Belgium, the Netherlands and Finland. Sophisticated services tailored to customer needs promise additional benefits.
